15 YEARS IN TWO SLIDES.

SOME/IP

HISTORY

SOME/IP
Work on Proposal @ BMW

2011

SOME/IP Standards
AUTOSAR and ISO

2013

2014

First Open-Source Stack
vsomeip by GENIVI/COVESA

2015

2016

2012

SOME/IP Draft v2
Supplied to ISO, AUTOSAR, GENIVI

2014

2015

First SOPs
Model year 2015 and 2016

2016

2017

2019

SOME/IP Standards
OPEN Alliance TC8 Test Specifications

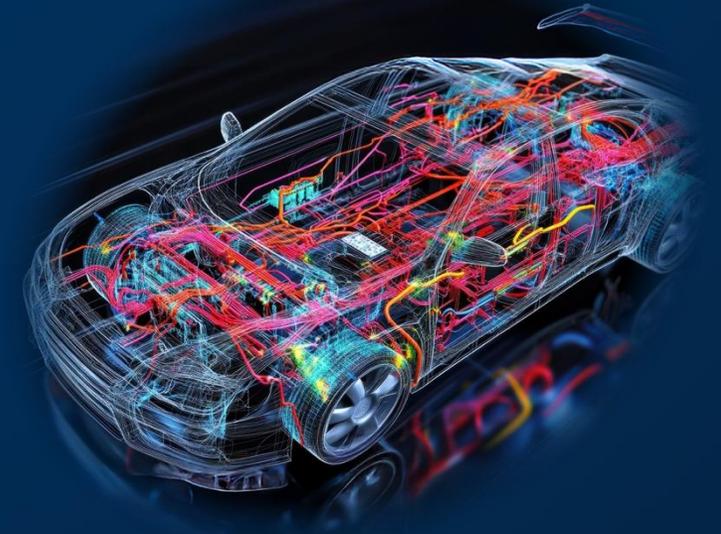

- First SOP in 2014 and many since.
- More than 40 million vehicles with SOME/IP produced.

For more details see Völker, Villanueva, Schäferling: "Is SOME/IP the right solution for the next 10 years of vehicles?", AEC 2024

SOME/IP

PHASE 1 FOCUS: AUTOSAR

- SOME/IP was not created in AUTOSAR but given to AUTOSAR.
 - IP was and is mainly developed and maintained by BMW and Technica.
 - AUTOSAR stacks were and are widely used.
- Challenge “Keeping SOME/IP one standard”
 - How to keep SOME/IP in AUTOSAR compatible to SOME/IP in general?
 - A mainly manual job by DocOwners in AUTOSAR (currently Technica).
 - But: OEMs added proprietary (AUTOSAR only) features to SOME/IP.
- Problem: IP usage rules are asymmetric:
 - IP from ASAM, ISO, OPEN, and others can be used in AUTOSAR.
 - IP from AUTOSAR is limited to AUTOSAR.
- This is especially difficult for communication protocols!

#2

15 YEARS OF SOME/IP TRENDS TODAY

```
(groupsalloc);  
EXPORTSYMBOL(groupsalloc);  
void groups_free(struct group_info *group_info)  
{  
void groups_free(struct group_info *group_info)  
{  
    if (groupinfo->blocks[0] != group_info->small_block) {  
        int i;  
        if (groupinfo->blocks[0] != group_info->small_block) {  
            for (i = 0; i < group_info->nblocks; i++)  
                freepage((unsigned long)groupinfo->blocks[i]);  
            for (i = 0; i < group_info->nblocks; i++)  
                freepage((unsigned long)groupinfo->blocks[i]);  
            kfree(groupinfo);  
            kfree(groupinfo);  
        }  
    }  
EXPORTSYMBOL(groupsfree);  
EXPORTSYMBOL(groupsfree);  
/* export the groupinfo to a user-space array */  
int groups_touser(gid_t_user *grouplist,  
/* export the groupinfo to a user-space array */  
const struct group_info *group_info)  
static int groups_touser(gid_t_user *grouplist,  
{  
    const struct group_info *group_info)  
  
    int i;  
    unsigned int count = groupinfo->ngroups;  
    int i;  
  
    unsigned int count = groupinfo->ngroups;  
    for (i = 0; i < group_info->nblocks; i++) {
```

CURRENT TRENDS

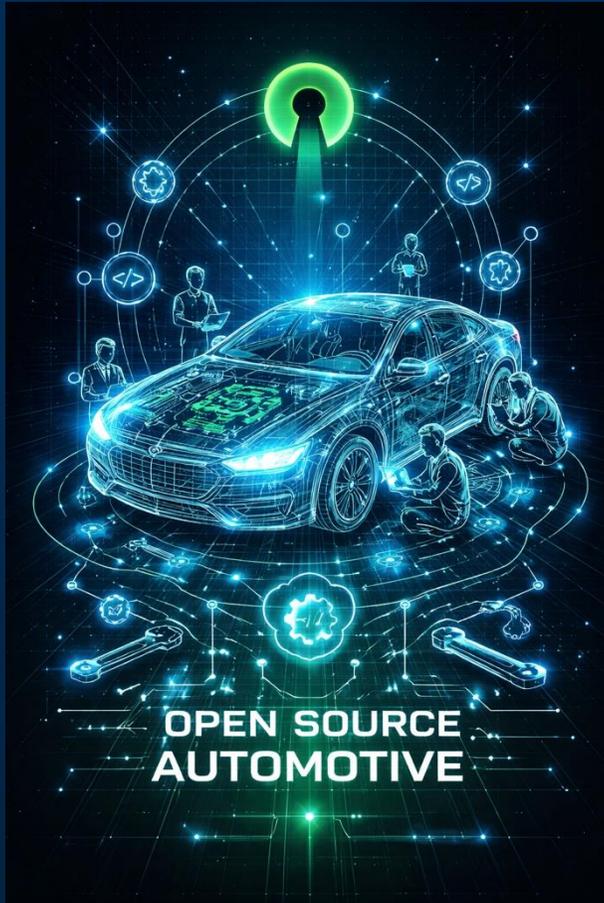

TREND 1: FROM CARS TO VEHICLES

- The pull towards SOME/IP was simple so far:
 - On Automotive Ethernet, SOME/IP is already there.
 - It is the only alternative created for automotive.
 - The eco system is established and wide-spread.
 - It is used by most of the major OEMs worldwide.
- Commercial vehicles introduce Ethernet.
 - Commercial Vehicle OEMs are looking at SOME/IP.
- But: they are not so AUTOSAR focused.
 - Currently, AUTOSAR limits the access to SOME/IP.

CURRENT TRENDS

TREND 2: THE OPEN-SOURCE ECO SYSTEM

- Open-Source initiatives promise major improvements:
 - Innovations do not have to wait for standard releases.
 - Improved development velocity instead of waiting for RFQ.
 - Continuous development instead of a new stack again.
 - Less vendor lock risk.
- Eclipse SDV is the forum for Automotive Open-Source.
 - S-CORE – huge alternative to Adaptive AUTOSAR.
 - OpenBSW – project for embedded real-time stack.
- Needed: SOME/IP specification for Open-Source?
 - AUTOSAR specifications do not allow Open-Source!

CURRENT TRENDS

NEEDS VS OFFERING

- Essential for SOME/IP and protocols in general:
 - One (open) Standard
 - Interoperability and Conformance
 - Ecosystem combining commercial and Open-Source
 - For middleware specifically: (open) configuration format
- AUTOSAR currently cannot fully provide this!
 - SOME/IP specifications cannot be used for Open-Source.
 - ARXML specification cannot be used for Open-Source.
 - Usage for other standards very limited as they generally allow Open-Source.

#3

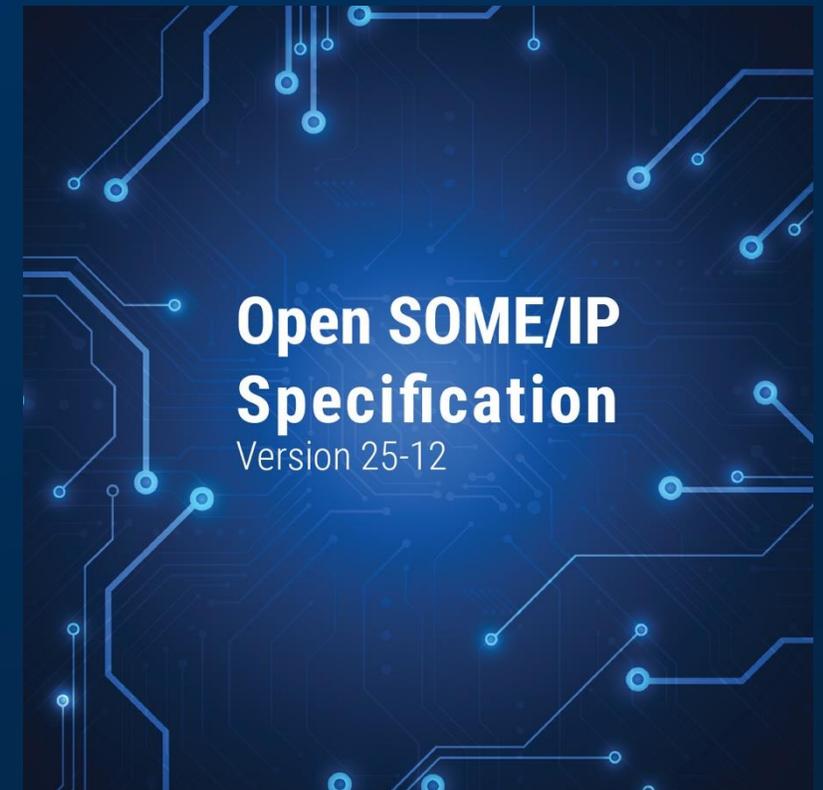

15 YEARS OF SOME/IP MAKING SOME/IP READY FOR PHASE 2

```
(groupsalloc);  
EXPORTSYMBOL(groupsalloc);  
void groups_free(struct group_info *group_info)  
{  
void groups_free(struct group_info *group_info)  
{  
    if (groupinfo->blocks[0] != group_info->small_block) {  
        int i;  
        if (groupinfo->blocks[0] != group_info->small_block) {  
            for (i = 0; i < group_info->nblocks; i++)  
                freepage((unsigned long)groupinfo->blocks[i]);  
            for (i = 0; i < group_info->nblocks; i++)  
                freepage((unsigned long)groupinfo->blocks[i]);  
            kfree(groupinfo);  
        }  
        kfree(groupinfo);  
    }  
EXPORTSYMBOL(groupsfree);  
EXPORTSYMBOL(groupsfree);  
/* export the groupinfo to a user-space array */  
int groups_touser(gid_t_user *grouplist,  
/* export the groupinfo to a user-space array */  
const struct group_info *group_info)  
static int groups_touser(gid_t_user *grouplist,  
{  
    const struct group_info *group_info)  
  
    int i;  
    unsigned int count = groupinfo->nblocks;  
    int i;  
  
    unsigned int count = groupinfo->nblocks;  
    for (i = 0; i < group_info->nblocks; i++) {
```

SOME/IP IMPROVEMENTS.

THE WAY FORWARD: THE OPEN SOME/IP SPECIFICATION

- Problem: SOME/IP needs an open standard.
- Solution: Open SOME/IP Specification was released.
- What is the Open SOME/IP Specification?
 - Rerelease of IP provided to AUTOSAR and others.
 - Specification as code based on Sphinx Needs.
 - Allows Open-Source implementations!
 - Allows to be used by ISO, SAE, or others as standard input.
- All features present?
 - SOME/IP core features present.
 - Proprietary features not included as IP must be submitted by authors.
 - Work on additional security specification items in progress.

<https://github.com/some-ip-com/open-someip-spec>

SOME/IP IMPROVEMENTS.

OPEN-SOURCE IMPLEMENTATIONS.

- Already existing (mainly based on BMW IP):
 - Wireshark code.
 - COVESA vsomeip.
 - pysomeip for prototyping.
- New:
 - opensomeip being developed based on Open SOME/IP Spec
 - opensomeip-python as python wrapper for opensomeip
- Next potential projects (under investigation):
 - Eclipse SDV: S-CORE
 - Eclipse SDV: OpenBSW

SOME/IP IMPROVEMENTS.

THE WAY FORWARD: FLYNC AS CONFIGURATION LANGUAGE.

- Problem: An open configuration language is missing.
- Solution: FLYNC was release.

- What is FLYNC?
 - Describing the whole vehicle (network) not only the ECU.
 - Configuration as Code language for Automotive
 - Design for humans, CI/CD, and git-based workflows.
 - YAML and Pydantic based.

- Are all aspects covered?
 - Still work in progress!
 - SOME/IP is mostly covered.
 - Some aspects of Automotive Ethernet in progress.

FLYnc

**One language.
One repository.
One reliable vehicle network.**

FLYNC is an open-source Configuration-as-Code platform that lets you design, version-control, and auto-generate network configuration artifacts from a single, human-readable YAML model.

#4 | 15 YEARS OF SOME/IP CONCLUSION

15 YEARS OF SOME/IP

CONCLUSION

- SOME/IP: 15 years of proven success!
- Phase 1: AUTOSAR Era
 - Established SOME/IP as a scalable, production-ready standard.
 - Enabled a strong ecosystem across OEMs and suppliers.
 - But: Open-Source and Commercial Vehicles demand a better option.
- Phase 2: Community-driven future
 - Open SOME/IP Specification better enables Open-Source and Commercial Vehicles.
 - FLYNC is creating a community to describe the whole vehicle.
- Other protocols and technologies will follow a similar evolution path toward openness and ecosystem-driven growth.
